

MyHarvia

Safe and easy remote control of your sauna

Harvia WiFi solutions, combined with the MyHarvia mobile app, have been designed to allow the safe and easy remote control of your sauna. These solutions allow you to switch on the sauna heater remotely and control other features that will save energy, as your sauna will be ready exactly when you are. The door sensor, a safety device included in the Harvia Xenio WiFi accessory package, keeps the sauna safe as it can be controlled remotely.

You can control the features of the Harvia Xenio WiFi control panel from your mobile device from anywhere and at any time using the MyHarvia mobile app.

Two different WiFi solutions for controlling your sauna remotely

Harvia Xenio WiFi package

- An accessory package for controlling your sauna remotely.
- Suitable for use with all Harvia XE model heaters (2021 models onwards).
- Suitable for Harvia Xenio CX170 & Harvia Xenio Combi CX110C (2020 models onwards).

The solution includes:

- Harvia Xenio WiFi control panel.
- Harvia door sensor.
- The MyHarvia mobile app can be downloaded for free from Google Play and the Apple App Store.

Harvia Xenio WiFi control unit

- Control unit for remote control of the sauna.
- Suitable for all E-model heaters and Combi heaters.
- Compatible with the heater's safety device and door sensor.

The solution includes:

- Harvia Xenio WiFi control panel.
- Power unit.
- The MyHarvia mobile app can be downloaded for free from Google Play and the Apple App Store.
- Please note, the power unit must be installed in a dry room.

MyHarvia mobile app

A sauna at your fingertips

MyHarvia is a mobile app that can be used to remotely control your sauna heater, lighting and ventilation. To use the remote control function you will need a sauna heater that is compatible with the app, a safety device and the Harvia Xenio WiFi control panel (the E-model heaters also require a separate control unit). Features may vary according to what equipment is connected.

The MyHarvia mobile app allows you to adjust the temperature the way you like it and select a time for the sauna to be ready for you wherever you are and when you want. A smart safety device ensures that heating your sauna remotely is safe.

You can control multiple pieces of compatible equipment using MyHarvia. The MyHarvia mobile app can be downloaded for free from Google Play and the Apple App Store.

MyHarvia

Using the Harvia Xenio WiFi control panel to support remote control

The modern and stylish Harvia Xenio WiFi is a sauna control panel that allows the user to control their sauna remotely, using a mobile device.

Using the control panel, you can activate the MyHarvia mobile app and safe remote control. The features of the control panel may vary according to what equipment is connected.

Harvia door sensor

Safety first

With Harvia's door sensor, you can switch on the sauna heater remotely and safely control other functions in the sauna area. The door sensor, which needs to be used with a compatible control unit, is a safety device under the European standard covering electric stoves (SFS-EN 603351 and 60335253). The sauna door must be closed so that the remote start can be activated from the control panel. If the sauna door is opened whilst the remote start-up function is active, the system will automatically prevent the sauna from being switched on remotely. After installation, you can check the sauna area and activate remote start up using the control panel.

What do you need to start using remote control?

Harvia XE model heater

Harvia XE model heater and remote use

If you own a Harvia XE model heater, you will require the Harvia Xenio WiFi package in order to use the remote control feature. This package features the Harvia Xenio WiFi control panel and Harvia SAB00103 door sensor. You will also need a wireless local area network and the MyHarvia mobile app.

Harvia E model heater

Harvia E-model heater and remote control with the Harvia Xenio WiFi package

The features of Harvia E-model heaters can be controlled using a separate control unit. Using the Harvia Xenio WiFi package, you can adjust the settings on your Harvia E-model heater remotely, if you have a Harvia Xenio CX170 or Harvia Xenio Combi CX110C control unit made in 2020 or later. The Harvia Xenio Combi CX110C control unit combined with the Harvia Xenio WiFi package allows the features of Harvia Combi heaters to be controlled remotely. You will also need a wireless local area network and the MyHarvia mobile app.

Harvia E model heater

Harvia E-model heater remotely controlled with the Harvia Xenio WiFi control unit

In addition to a Harvia E-model heater, you will also require a separate Harvia Xenio CX170 WiFi or Harvia Xenio Combi CX110C WiFi control unit* and sauna safety device. With the Harvia Xenio Combi CX110C WiFi control unit, you can also control the features of the Harvia Combi heater remotely. You will also need a wireless local area network and the MyHarvia mobile app.
